

**Do you want to see what the back of your eye looks like??
Now you can!**

We are pleased to provide our patients with an advanced digital retinal exam called the CenterVue DRS. This high resolution screening photograph of your retina will help us document, review, and compare your retina over time. Dr. Weir will use your unique retinal photograph to screen for eye diseases and improve her ability to view your internal ocular health at a much higher resolution than the standard ocular microscope. The DRS retinal photo screens for ocular diseases such as macular degeneration, glaucoma, retinal holes, retinal detachments, high risk medication damage, and diabetic retinopathy (all of which can lead to partial loss of vision or blindness.)

Your retinal photograph will be a permanent record in your medical file and allow Dr. Weir to compare your ocular health over time. The photograph is fast, easy, and painless. And best of all – (usually) **no dilation** drops are needed!

Dr. Weir highly recommends this procedure for all of her patients. “A picture is worth a thousand words.” Because insurance will not pay for your retinal photograph, unless eye disease is present, the DRS retinal photograph is a \$42 out-of-pocket expense. However, if you choose to take advantage of the DRS technology, we will provide a same day credit of \$42 to be used in our optical towards any frame purchase, including non-prescription sunglasses!

Please select one of the following boxes:

I AGREE TO have my retinal health evaluated with the CenterVue DRS digital retinal examination.

I DO NOT wish to have my internal ocular health screened with the CenterVue DRS retinal photograph. I understand that I will still have a thorough eye examination with slit lamp observation.
